

TECHNICAL DATA SHEET

KLO-203P

Product description :

KLO-203P is a superior grade of water-based release agent. The micro-thin film has higher abrasion resistance and longer mold protection.

KLO-203P designed to use on the demolding process of the automotive rubber part, rubber footwear and rubber flooring.

KLO-203P can use as a concentrate or dilute with water 1:3 to 1:5 depend on rubber size

Properties:

Appearance	:	Milky
Density	:	0.99 g/cm ³
Shelf life	:	12 month

Advantage:

- Water-based and safety to environment and worker
- Easy to apply by both spraying or wiping
- High slip and glossy
- Production line can be run smoothly since KLO-203P provide multiple releases

Application:

- Thoroughly clean the mould. Apply at least two uniform, thin coats before it goes to production. Allow a short drying time between each coat
- Reapply a light coat of KLO-203P at process temperature when required, to maintain the desired release
- The application can be spraying or wiping
